FxPro VPS
User Guide

Welcome to the user guide for the FxPro VPS, provided by Beeks FX.

In today's fast-paced trading environment, traders need the ability to execute trades quickly and efficiently. That's where a Virtual Private Server (VPS) comes in.

This guide will take you through all the necessary steps to set up and start using the FxPro VPS for an optimal trading experience.

■ What is a VPS?

A VPS is a remote computer that allows you to run Expert Advisors (EAs) or cBots continuously with no downtime and with low latency of trade execution. Using a VPS, traders can reduce the latency between their trading platform and the market, leading to faster and more accurate execution of trades.

Most orders at FxPro are executed in under 13ms, but traders located in regions such as China may experience high latency times when trading normally without a VPS. However, if they were to execute their trades from the FxPro VPS, they would experience a much lower latency.

How do I subscribe for a VPS?

You can subscribe to FxPro VPS by visiting our dedicated website page and submitting the small form.

Alternatively, you can send an email to support@fxpro.com, and a customer support representative will assist you with this.

How much does it cost?

The FxPro VPS is free for VIP clients and costs $30 monthly for other account types.
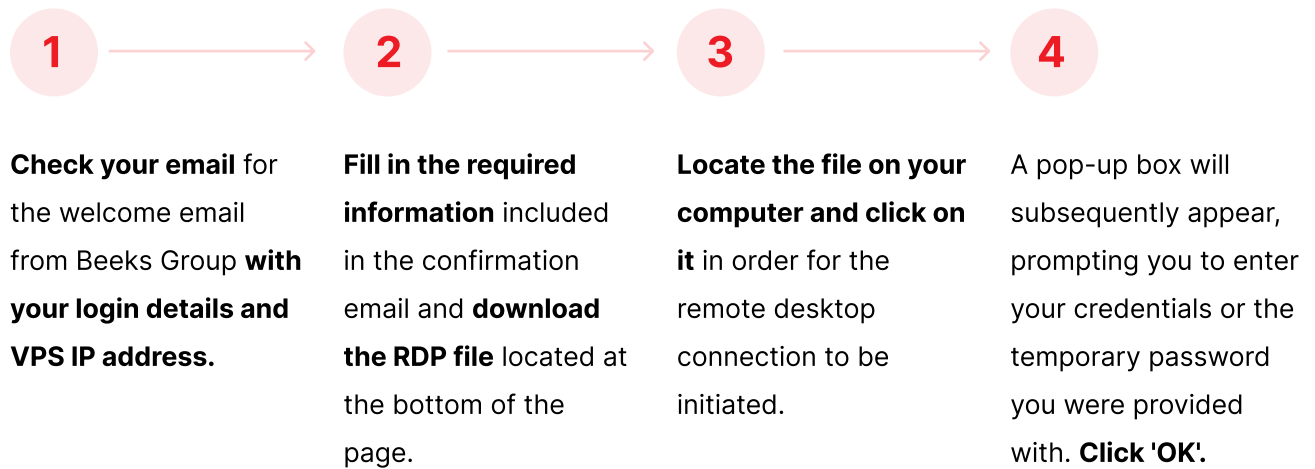

What are the Specs?

- **2560 MB RAM**
- **1 vCPU**
- **30 GB Disk Space**
- **Windows Servers 2022**

However, if you require a higher-spec VPS, please speak to our support team and we may be able to arrange a different one for you.

How to install VPS

| 1 | → | 2 | → | 3 | → | 4 |

Check your email for the welcome email from Beeks Group **with your login details and VPS IP address.**

Fill in the required information included in the confirmation email and **download the RDP file** located at the bottom of the page.

Locate the file on your computer and click on it in order for the remote desktop connection to be initiated.

A pop-up box will subsequently appear, prompting you to enter your credentials or the temporary password you were provided with. **Click 'OK'.**

You should now be connected to your VPS, which is already preinstalled with our trading platforms.

Beeks

Can I use it on a mobile device?

Yes! You just need to install the Remote Desktop app on your device and log in with your Beeks FX details. You can find an instruction guide here. This is ideal for keeping an eye on your trading robots even when on the go and not near your PC/laptop.

■ Tips for using VPS

We suggest running no more than four (4) MT4/MT5 platforms with up to ten (10) expert advisors (EAs), or a single (1) cTrader platform with a cAlgo Bot on a single VPS, or it may become overloaded.

If you experience issues with disk space, please contact our customer support for assistance.

To assist traders, an application has been designed which will automatically start a platform on any VPS reboot; this is called the POM application. You can find instructions on how to implement this here.

Where can I get assistance?

If you need help installing or using the VPS you can visit the Beeks FX support page here.
